

# UNIFORM GLOBAL CARBON TAX & 100% DIVIDEND

Previous efforts based on COP1-25 have failed.

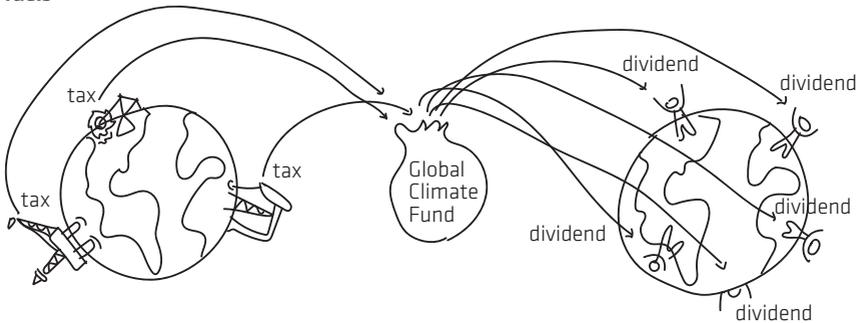

## The current approach must be *radically* changed on COP26!

**1. Uniform global carbon tax levied on extraction of fossil fuels**

**2. Globally collected and distributed**

**3. Equal dividend to every adult in the world**

**Fair**—no cheating, **Effective**—all fossil carbon, **Simple**—low administration  
**Predictable**—gradually rising tax, **Equal**—socially sensitive

# Uniform Global Carbon Tax & 100% Dividend meets perfectly COP26 goals!

## Secure global net zero by mid-century and keep 1.5 degrees within reach

- **ETS, national carbon taxes and subsidies** are inefficient mechanisms. They cover only a small part of carbon emissions (about 20%). Their intensification will lead to escalation of administration, disruption of the global market and enormous costs.
- **Limit national activities and start acting globally!**
- We **need** clear and **simple rules that charge for all global CO<sub>2</sub>** emissions and do not allow cheating.
- Uniform carbon tax **must be levied on extraction** of all global fossil fuels in proportion to their carbon content. **Not on products!**
- It is easier to keep an eye on hundreds of mining companies in the world than to argue about never ending calculating the carbon footprint of each product. **No need for CBAM:** Carbon Border Adjustment Mechanism!
- The paid uniform global carbon tax is added to the price of fossil fuels. Then the tax is **automatically projected** in prices of all products and services exactly **according to their carbon footprint without any administration**. This affects all human activities in favour of reducing global CO<sub>2</sub> emissions.

**SIMPLE, EFFECTIVE, CHEAP, RELIABLE**

## Mobilise finance

- Promises are not kept, the Green Climate Fund is still not filled.
- The fund can be filled by a small part of the tax collected from mining companies around the world.
- **Distribution** of collected carbon tax as an **equal dividend to all** adults in the world causes a natural **flow of money from citizens with high carbon footprint** of developed countries **to citizens with low carbon footprint** of developing countries.
- **All low-carbon** behaviour, measures, inventions and technologies spontaneously **push through** on their own, **even without subsidies**.
- Instead of politicians, the **fair market decides** how best to protect the climate.
- The **pre-announced scenario** of an initially low carbon tax with relevant progression over time meets the Paris Agreement. Everyone will have enough time to **adapt without any shocks**.

**GRADUAL, PREDICTABLE, EQUAL, SOCIALLY SENSITIVE**

## Work together

- To achieve global climate justice, all countries need to agree to the tax.
- Let the **UN sets up a forum for discussing** Uniform Global Carbon Tax and 100% Dividend!

**DON'T TAX CARBON LOCALLY, TAX THE CARBON GLOBALLY!**
